MOTIVATION AND CONTRIBUTIONS

- Modal Logic K Satisfiability Problem is **PSPACE complete**.
- How to solve a PSPACE problem with a SAT solver ? By using the latest features of SAT solver: unsatisfiable cores.
- Contribution: An CEGAR-like framework called RECAR and an instantiation for modal logic K within the solver MoSaiC

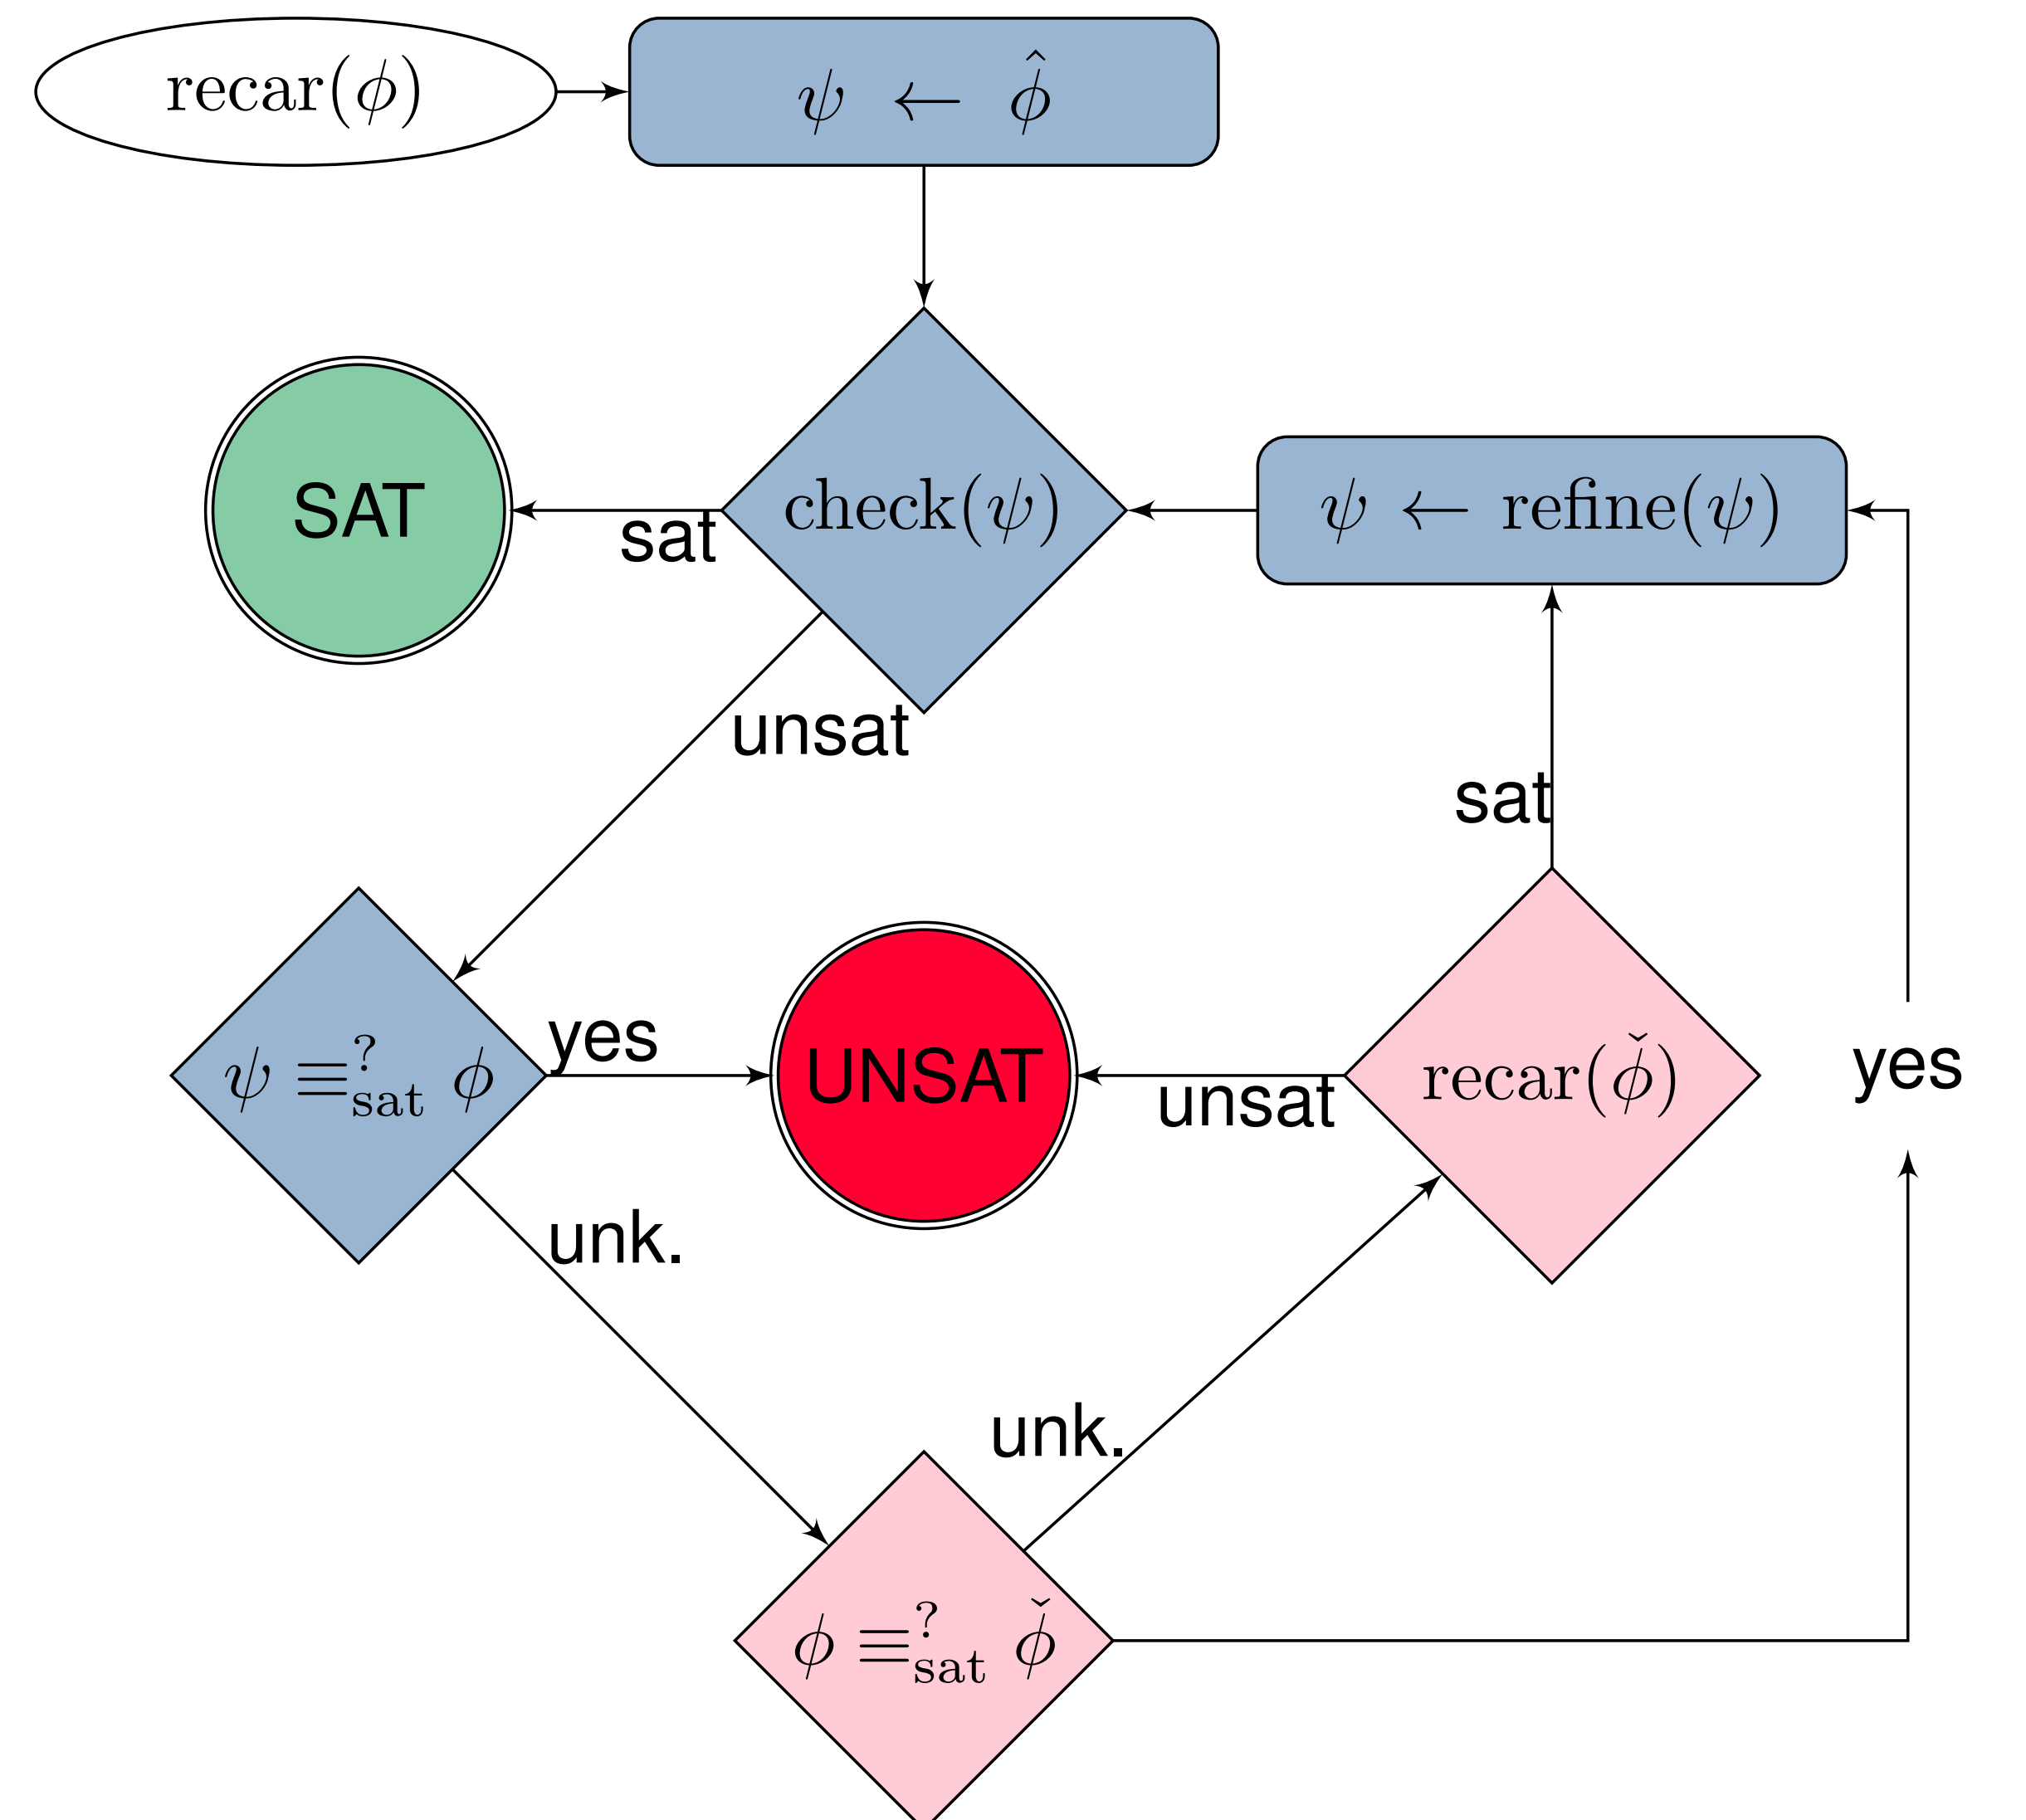

CEGAR WITH OVER-APPROXIMATIONS

CEGAR WITH UNDER-APPROXIMATIONS

RECAR: RECURSIVE EXPLORE AND CHECK ABSTRACTION REFINEMENT

EXPERIMENTAL RESULTS: RECAR AGAINST CEGAR

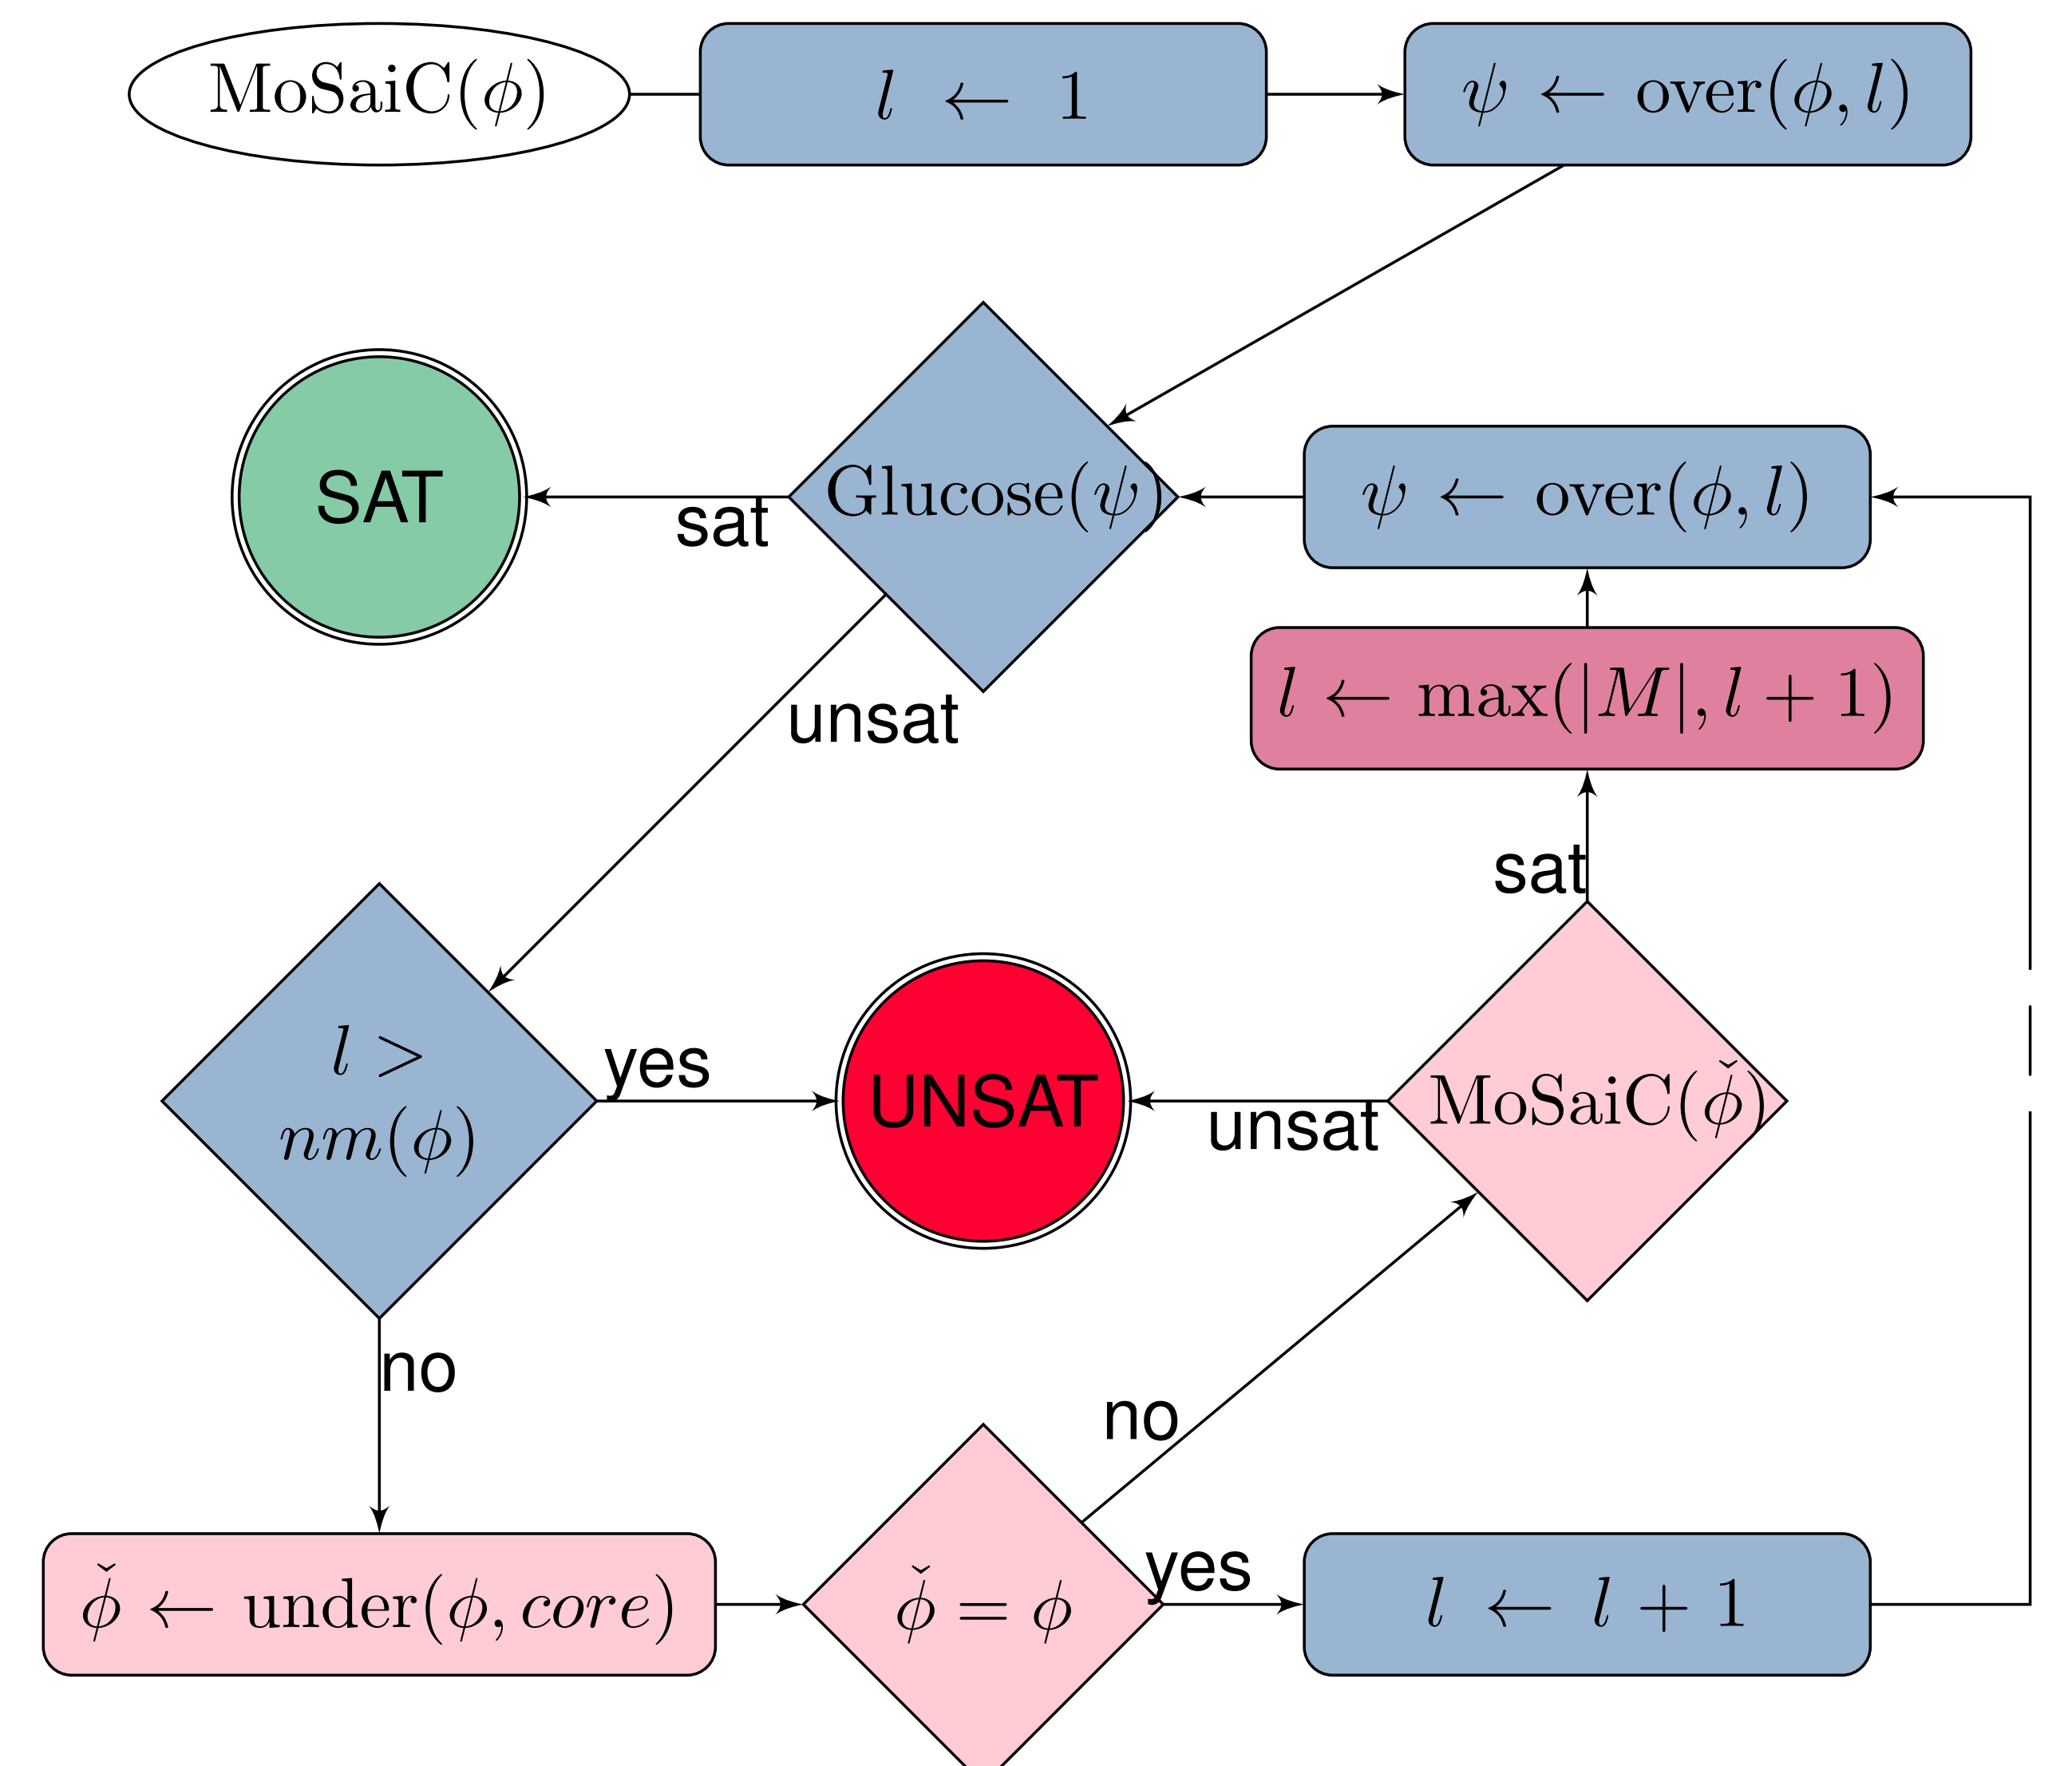

The RECAR-loop increases strongly the results on UNSAT benchmarks.

EXPERIMENTAL RESULTS: MoSaiC AGAINST SOTA SOLVERS

MoSaiC outperforms the other solvers on the benchmarks considered.

MoSaiC: MODAL LOGIC K SOLVER USING RECAR

EXPERIMENTAL SETTINGS

2 configurations of MoSaiC: CEGAR vs RECAR

Many state-of-the-art solvers for modal logic K satisfiability problem

CentOS 6.0, bi-proc. XEON, 4 cores, 3.3 GHz, 32GB, 900 seconds.

CONCLUSION AND FUTURE WORK

- * RECAR is an efficient merge between CEGAR-over and CEGAR-under
- RECAR for other PSPACE problems
- Improve MoSaiC for others modal logics
